

Module 1 Cheat Sheet: Importing Data Sets

Data Analysis with Python

Cheat Sheet: Importing Data Sets

Package/Method	Description	Code Example
Read CSV data set	Read the CSV file containing a data set to a pandas data frame	<pre>1 df = pd.read_csv(<CSV_path>, header = None) # load without header df = pd.read_csv(<CSV_path>, header = 0) # load using first row as header</pre> Note: The labs in this course run in JupyterLite environment. In JupyterLite environment, you'll need to download the required file to the local environment and then use the local path to the file as the CSV_path. However, in case you are using JupyterLabs, or any other Python compiler on your local machine, you can use the URL of the required file directly as the CSV_path.
Print first few entries	Print the first few entries (default 5) of the pandas data frame	<pre>1 df.head(n) #n=number of entries; default 5</pre>
Print last few entries	Print the last few entries (default 5) of the pandas data frame	<pre>1 df.tail(n) #n=number of entries; default 5</pre>
